Experiment No. 5
Implement a program on Packages.
Date of Performance:
Date of Submission:

Vidyavardhini's College of Engineering and Technology Department of Artificial Intelligence & Data Science

Aim: To use packages in java.

Objective: To use packages in java to use readymade classes available in them using square root method in math class.

Theory:

A java package is a group of similar types of classes, interfaces and sub-packages. Packages are used in Java in order to prevent naming conflicts, to control access, to make searching/locating and usage of classes, interfaces, enumerations and annotations easier, etc.

There are two types of packages-

- 1. Built-in package: The already defined package like java.io.*, java.lang.* etc are known as built-in packages.
- 2. User defined package: The package we create for is called user-defined package.

Programmers can define their own packages to bundle group of classes/interfaces, etc. While creating a package, the user should choose a name for the package and include a package statement along with that name at the top of every source file that contains the classes, interfaces, enumerations, and annotation types that you want to include in the package. If a package statement is not used then the class, interfaces, enumerations, and annotation types will be placed in the current default package.

Code:

```
import java.util.*;

// Main Class
class demo1 {

    // Main driver method
    public static void main(String[] args)
    {

        // Scanner to take input from the user object
            Scanner myObj = new Scanner(System.in);
    }
}
```

Vidyavardhini's College of Engineering and Technology Department of Artificial Intelligence & Data Science

```
String userName;

// Display message
// Enter Your Name
And Press Enter
System.out.println("Ent
er Your Name:");

// Reading the integer age entered using
// nextInt() method
userName = myObj.nextLine();

// Print and display
System.out.println("Your Name is:" + userName);
}
```

```
C:\KOMAL SAPATALE >java demo1.java
Enter Your Name:
Jash Mhatre
Your Name is : Jash Mhatre
```

Conclusion:

Comment on the autoencoder architecture and the Image compression results.
